SUMMARY

Experienced analytics professional with over five years building and leading scalable data-platforms, dashboards and automation workflows that accelerate decision-making and drive operational efficiency. I design and deploy data strategy and end-to-end pipelines (SQL, Python/R, Looker/Power BI) that ingest high-volume sources, automate manual tasks, and deliver actionable insights—reducing cost, improving accuracy, and supporting leadership on growth, retention and operational KPIs. Skilled at partnering across engineering, operations, finance and vendor teams to embed analytic rigor and data-driven culture.

SKILLS

Data & Analytics

- SQL, Python, R
- Data Pipeline Design, ETL/ELT, Automation (Retool, Apps Script)
- Dashboarding & BI: Looker Studio, Power BI, Tableau
- Exploratory Data Analysis, Statistical Modelling
- Predictive Analytics (classification models, anomaly detection, sentiment analysis)
- Data Quality, Validation, and Documentation

Product & Collaboration

- Writing PRDs & Data Requirements
- Product Roadmapping & Feature Prioritization
- User Research, Stakeholder Alignment
- Agile Collaboration with Engineering & Operations
- Workflow & System Design

Business & Strategy

- Financial Modelling, Forecasting, Fraud Detection
- KPI Design & Performance Reporting
- Operational SOP Development
- Cross-Functional Leadership & Decision Support

EDUCATION

MS in Computer Science (3.43)

Independent University, Bangladesh | 2023 – 2025

MBA in Accounting & Information Systems (3.01)

University of Dhaka | 2009 – 2013

EXPERIENCE

Specialized Operations Lead — Commure

Mar 2026 – Present | Dhaka

- Lead end-to-end operations for specialized claim streams driving accuracy, throughput, and standardization across complex payer workflows.
- Drive error reduction and operational efficiency through analytical frameworks and systems (Retool, validation tools, dashboards), proactively identifying submission gaps and scaling process improvements.

Senior Operations Analyst — Commure

Nov 2025 – Feb 2026 | Dhaka

- Led specialized claim workflows and error-reduction initiatives, improving claim quality and reducing submission defects through root-cause analysis and process optimization.
- Built and enhanced internal tools, validation checks, and reporting layers to improve operational visibility and support cross-functional decision-making.

Specialized Data Analyst — Commure

Apr 2025 - Oct 2025 | Dhaka

- Developed SQL pipelines, dashboards, and automated workflows to support large-scale clinical and operational analytics.
- Translated operational needs into data models and validation logic, improving data accuracy and reducing manual reporting effort.

Technical Product Manager — Bongo

Mar 2024 - Apr 2025 | Remote

- Led the conceptualization, design, and development of Bongo's OTT Content Owner Dashboard — enabling content creators to track revenue, consumption metrics, audience patterns, and earnings.
- Worked cross-functionally with engineering, design, marketing, and content teams to build scalable, insight-driven product features.
- Defined product requirements, created roadmaps, and guided agile development cycles for analytics features.
- Introduced data workflows, KPI frameworks, and automation logic to improve reporting quality and reduce manual processing.
- Conducted user research and analyzed platform behavior trends to inform product improvements and feature prioritization.

Data Analyst — Bongo

Nov 2021 - Mar 2024 | Hybrid

- Analyzed weekly content performance, audience behavior, churn indicators, and revenue trends across millions of data points.
- Built and maintained relational databases and end-to-end data pipelines integrating platform, metadata, and external datasets.
- Developed dashboards in Google Data Studio / Looker Studio to deliver real-time performance visibility to leadership.
- Used R and SQL for complex forecasting, anomaly detection, and deep-dive investigations.
- Delivered monthly insights and executive-level reports with actionable recommendations for optimization.
- Established data preservation, backup, and QA practices to ensure reliability of business-critical datasets.

Finance, Analytics & Systems

2010 - 2021 | Dhaka

Built a strong foundation across finance, business operations, and systems improvement through work in financial modelling, reporting, auditing, automation, and process design. Worked across startups and growth-stage businesses including Apon Wellbeing, Jeeon, Lamudi/Rocket Internet, Bay Developments, contributing to business process analysis, control reviews, workflow automation, operational reporting, and system-driven decision support.

SELECTED PROJECTS

- **Reconciliation & Claim Visibility Dashboard**

Built a real-time claims dashboard that tracks rejection patterns, recovery timelines, and encounter bottlenecks — improving visibility and reducing blocked-encounter turnaround by 50%.

Tools: Retool, SQL, Python

- **Mojo Analytics Dashboard**

Developed a revenue and performance insight dashboard for 1,000+ content partners, enabling trend forecasting, partner transparency, and faster revenue reporting.

Tools: SQL, Python, Jira

- **Automated Reporting System for YouTube Channels**

Created an automated reporting pipeline with real-time channel/video metrics, reducing manual work and accelerating content decisions for the content operations team.

Tools: Looker Studio, PowerBI, SQL, Google Apps Script

- **Fraud Detection & Anomaly Monitoring System**

Designed an automated fraud-detection and anomaly-monitoring framework using multi-source data, reducing financial leakage and saving significant operational costs.

Tools: SQL, R, Looker Studio

- **Inventory Management & Forecasting Tool**

Built a data-driven inventory & cash-flow forecasting tool that reduced stock losses, optimized procurement cycles, and improved working-capital planning.

Tools: SQL Server, Google Sheets, Java

PUBLICATIONS

- **[From Manual Logs to Smart Finance: Assessing User Readiness for AI-Powered Personal Expense Tracking in Bangladesh](#)**

Developed the core research concept and methodology. Focused on AI-driven personal finance automation, user behavior analysis, and readiness modelling.

- **[CNN for Evaluating the Suitability of Ovarian Cancer Patients for Bevacizumab Therapy](#)**

Medical AI Research Project (IUB), Publication in Progress — Lead Researcher

Designed and trained a CNN-based predictive model to support treatment suitability decisions using medical imaging.

- **[Wearable Health Monitoring for Senior Citizens with Mobile App Access for Caregivers and Family Members](#)**

Designed wearable health solution and app; refined through iterative user and expert validation.
